Guidelines and best practices for multisite EHR recruitment

The problem: there is a need for mutual understanding of best practices and guidelines for sharing EHR-Derived Cohorts for recruitment in multi-site trials between UCs.

Why this project?

- 1. UC Rely and upcoming NIH Reliance mandate
- 2. Increased use of EHR-derived recruitment cohorts
- 3. Technically possibly but logistically difficult

Single-site EHR Recruitment Use case: UCSF

Recruitment Letter

Potentially Eligible UCSF Patients

Multisite EHR Recruitment Use case: UCLA and UCSF

Recruitment Letter

Potentially Eligible UCSF Patients

Multisite EHR Recruitment Use Case

Why share the data?

- Administrative efficiency
- UCLA has multilingual staff and capacity to recruit a more diverse population
- UCLA has funding to perform these activities

Consultation with Privacy

- UC is one covered entity under HIPAA
- This is allowable
- Proceed with caution
- Opportunity to develop best practices around patient contact

Multisite EHR Recruitment

Recruitment Letter

Potentially Eligible UCSF Patients

Using these guidelines

- The vision:
 - Researchers use these guidelines and best practices to create respectful, compliant recruitment plans
 - Create common understanding and acceptance of what this means
 - Establish a pathway for multisite EHR recruitment

Partnerships - Thanks
